Liverpool Connections: A Transport Adventure

Proludic®
Designer of play and sports areas

EVERTON TERRACE, LIVERPOOL

Client:	Liverpool City Council
Address:	Everton Terrace, Heyworth, L5 4LA
Budget:	£75,000
Age Range:	Toddler, Junior, Teen
Surfacing:	Wetpour

Liverpool City Council wanted to transform a tired and outdated play area into a new, bright and exciting space, bringing colour and energy to the surrounding green areas. The brief called for excellent play value at every level, with an inspirational, flowing design that encouraged children to climb, crawl, jump and run.

Everton Terrace Park had been closed for many years. For most residents, it was their closest park, offering children an opportunity to play near their homes. Bringing this much-needed community space back to life was therefore an important part of the project, creating somewhere local children and families could enjoy once again.

> "The play park has completely opened up a whole new section of the park that was closed for so long."

Following an assessment of the existing surfacing, Proludic confirmed it was suitable for a wetpour overlay rather than full replacement. This significantly reduced surfacing costs, allowing the budget to remain focused on maximising the quality, variety and play value of the equipment.

A strong Liverpool transport theme runs throughout the park, with references to John Lennon Airport, Lime Street Station, the Mersey and the city itself. The design brings imagination and a sense of local identity to the play area, reassuring residents that the park has been designed with them at heart and is not a generic provison.

On the upper level, a dedicated junior challenge zone introduces more dynamic climbing, balancing and active play. A large central multiplay unit provides opportunities for climbing, sliding and social interaction, while ground-level sensory and interactive panels offer alternative ways to engage with the space.

The equipment selection combines inclusive, imaginative and challenging play, including accessible roundabouts, seesaws, swings, themed train play, sensory panels and a variety of climbing and balancing activities. Together, these provide a broad mix of physical, social, sensory and role-play opportunities for children of different ages and abilities.

By carefully balancing essential surfacing works with a varied equipment offer, Proludic helped bring Everton Terrace Park back to life as a colourful, engaging play space with strong play value for the surrounding community at the best possible cost for the council.
