

Balancing and climbing equipment

Technical specification

J3800M

1- **The 95mm square posts** are made of painted steel, ensuring robustness and durability.

2- **The platforms and the climbing walls** are made from a 12.5mm thick, textured, non-slip compact material (HPL).

3- **The climbing holds** are made of polypropylene. They are non-toxic, non-flammable and shock and UV resistant. They give the units their strength and help to protect them from vandalism.

4- **The tubes** are made of stainless steel, diameter 40mm, guaranteeing lasting durability and reliability of the equipment.

Injection moulded polyamide fixings connect the posts to the platforms and the various play features. They are non-toxic, flame shock and U.V. resistant. The thickness of the polyamide makes the equipment both strong and vandal resistant.

5- **The ropes** are made of galvanised steel cable covered with polypropylene. **Injection moulded polyamide connectors** link the cables and keep the nets in shape.

6- **The stainless steel fixings** are protected by polyamide anti-vandalism caps.
