

Clifford Skate Park

Numerous sport solutions

Client: Kingsteignton Town Council

Address: Longford Lane, Kingsteignton, TQ12 3LH

Budget: £80,000

Age Range: Junior

Project Story

Proludic has been working with Kingsteignton Town Council and the Friends of Clifford Park for a number of years to help consult and fund-raise to redevelop the main play area in the heart of the town. With the existing MUGA being partly removed, and the existing skate ramp failing a ROPSA inspection this phase of the works took priority for the working group.

After consultation with the public, a design was created with the idea of providing a much more open, friendly, and accessible Multi-Use Games Area which includes a new skate ramp, goal end, table tennis table, and multi-directional basketball game.

Before

After

The ramp is going down really well. Apparently, it's a 'really sick, mini, and really smooth. It's grippy but at the same time reverting is easy!'

The overall opinion is it's great and people are really pleased with it.

Rhino Ramps

Rhino Ramps use only the highest quality of materials, making it the leading brand in skate park equipment. The composite construction gives skaters the smooth ride they desire to pursue their sport. Rhino Ramps equipment also incorporate a galvanised stainless-steel finish which provides low maintenance and lifelong durability. This longevity is a prerequisite for high traffic urban neighbourhoods and those parks that endure the most extreme climates.
