Address:	Well Green, Scotlandwell, KY13 9JA
Budget:	£100,000
Age Range:	Juniors, Teenagers
Ranges:	ACTI'Ninja, Themed
Surfacing:	Wood chip, Grass mat, Wetpour

Project Story: Located on the edge of Loch Leven, the historically important village of Scotlandwell in Portmoak, Kinross-shire, recently saw the transformation of its local play area into an exciting, inclusive space for all ages. Commissioned by the Perth and Kinross Council and supported by Scottish Government funding, the project aimed to deliver maximum play value and durability within a defined budget and site footprint.

A key requirement was to offer a wide variety of play and sports experiences, including accessible options and to install a free-draining, wheelchair-friendly path throughout. The result is a vibrant and diverse playground that features a wide selection of Proludic equipment, connected seamlessly by a Suds Bond path for all-weather access.

The new play area includes three different climbing frames tailored to various age groups, a four-way springer, the **J839 Falling Star Spring Rider**, and the **J2400 Speed Gyro Spinner** - an inclusive roundabout that promotes social interaction and balance. The **J514 Cableway** adds thrill and movement with its 27-metre zip-line, while the monkey bar archway climbing frame challenges older children with upper-body play. A set of swings, including flat, cradle, and inclusive pod seats (via the **J496 Multi-Seat Swing Module**), ensures accessibility and enjoyment for toddlers to teens. The **R1308 Multi-Use Games Area** introduces a 7-a-side football goal to encourage team play and sports-based activity.

Community input was a vital part of the process, with residents actively engaged during consultations alongside Council Officers. The old play equipment and surfacing were removed, except for a popular junior climbing frame with a slide, which was retained and integrated into the new design.

This successful upgrade has revitalised the heart of the village, offering a safe, inclusive, and adventurous environment for children of all abilities was delivered on time, within budget and with long-term durability in mind.

Working with Proludic Ltd up here in Scotland, continues to be both rewarding and innovative. The whole team approach really does help with the delivery of projects throughout this period of Scottish Government Funded projects. With early advice on equipment selection and a cost effective and efficient overview of our designs ensures we deliver play areas that are both fit for purpose and right for the communities they serve. Dovetailed with this process are quality sub-contractors that are managed efficiently with excellent communication at all stages of the build.
