

Transformed Space for the Whole Community

WYNDHAM PARK MUSA (MULTI USE SPORTS AREA)

Client: Yeovil Without
Parish Council

Address: Cunningham Road,
Yeovil, BA21 5DY

Budget: £210,000

Age Range: Toddlers, Juniors,
Teenagers, Adults

Ranges: Kanopé, ACTI'Fit

Surfacing: Wetpour

Proludic worked in partnership with the client, residents' group and Primrose Lane Primary School to transform a previously unused parcel of land, left by a housing developer, into a vibrant community hub. The brief combined two ambitions: a large multi-use sports area and a smaller neighbourhood space offering play, fitness and social opportunities for all ages.

Community engagement shaped the project from the outset. Consultation sessions, including events at the local school, gathered feedback from children, families and stakeholders. Their ideas influenced the final design, from inclusive play features and spaces for teenagers to artwork created with the help of children from Primrose Lane Primary School which was then added onto the multiplay unit.

The completed scheme brings together a bespoke 22.5m by 15m MUSA, under-fives play area, outdoor fitness equipment and welcoming social spaces. The sports area supports football, basketball, mini football, target games, table tennis and ball-return activities, allowing several groups to use the area simultaneously. Wide access points, ground markings and lower-mobility games make the facility inclusive and easy to navigate.

Younger children can enjoy a Diabolo multiplay unit, springer, a four-seat seesaw, a wheelchair-accessible roundabout (J2409), trampoline and sensory panels. A rain wheel, activity trail and tactile features encourage imaginative, physical and sensory exploration.

“ It was really rewarding to see all the hard work put in by the parish and residents' group who helped us create an inclusive community space which offers something for everyone. ”

Joe Lofty –
Proludic Area Manager
(South-West)

The fitness zone includes a Power Tower (J37212), Horizontal Bars, Twister pendulum (J37224), Bike (J37217), Elliptical trainer (J37215), Chest press (J37218) and Overhead press (J37211). Transferable seating, wheelchair-operable equipment and an all-weather surface support users with different abilities. QR codes link each station to the free ACTiFit app, providing exercise guidance tailored to the equipment and user.

A central social area includes accessible picnic tables, a communication panel, hammocks, seating and a performance space. Sensory planting and games such as chess and snakes and ladders create further reasons to stay, meet and socialise.

During construction, unforeseen ground conditions beneath the MUSA required additional foundation build-up and retaining works. Proludic worked closely with the client and installation partner to develop an effective engineering solution, ensuring the project progressed smoothly without compromising the design vision. The completed facility is a robust, inclusive destination site that successfully combines play, sport, exercise and community space, creating a lasting asset for the local community.
